▼ Project Information

Project Name* East River Road Trail Gap Project

Select Primary county where project is located* Anoka

Cities or Townships where the Project is located* Fridley

Jurisdictional Agency (if different than applicant): Anoka County

Brief project description*

The City of Fridley proposes to improve bicycle and pedestrian safety and increase the overall connectivity of the City's Active Transportation network through the construction of a grade-separated, 0.2 mile trail. This infrastructure will be constructed along East River Road/CSAH 1 (a RBTN Tier 1 Alignment), spanning northward from Mississippi Street/CSAH 6 (a RBTN Tier 1 alignment) to Rice Creek Way where the East River Road section of the Mississippi River Regional Trail begins. East River Road is a four lane A Minor Expander roadway that currently possesses no existing sidewalks or trails, forcing non-motorized users to share space with motorized vehicles. East River Road was mapped as part of the City's High Risk Network and listed amongst the highest priority roadway segments in a recently completed roadway safety analysis. The proposed trail is listed as a focus route in the City's existing Active Transportation Plan. Additional complete street components included speed feedback signs and tightened corner radii.

Provide the project length to the nearest one-tenth of a mile* 0.2

Lead Agency* City of Fridley

ZIP Code where majority of work is being performed* 55112

Approximate begin construction date (mo/yr)* 7/1/2027

Approximate end construction date (mo/yr)* 9/30/2027

Name or description of trail/ped facility (i.e., Cedar Lake Trail, University Avenue Sidewalk)

East River Road Trail

Termini (Termini listed must be within 0.3 miles of any work) (Do not include legal description; include name of roadway if majority of facility runs adjacent to a single corrdior)

Roadway Name* East River Road (CSAH 1)

From Cross-Steet*	Rice Creek Way NE
To Cross-Street*	Mississippi St NE (CSAH 6)
Length of multimodal facilities included in project (nearest 0.1 miles, include all that apply using the best available information)*	0.2
Multiuse trail*	0.2
Separated bicycle facility*	0
On-street bicycle facility*	0
Sidewalk*	0
Miles of facility on the Regional Bicycle Transportation Network (nearest 0.1 miles):	0.2
Miles of new RBTN facilities:	0.2
Miles of improved existing RBTN facilities:	0
Miles of facility on the regional trail network (nearest 0.1 miles)*	0.2
Miles of new Regional Trail facilities*	0.2
Miles of improved existing Regional Trail facilities*	0
AADT on parallel or adjacent roadway*	12119
Number of improved ADA ramps*	2
Number of intersection improvements*	1

Primary types of work (Examples: Grade, AGG Base, BIT Base, BIT Surf, Sidewalk, Signals, Lighting, Guardrail, Bike path, Ped Ramps, Bridge, Park and ride, etc.)*

Grade Separated Trail, Dynamic Speed Display, Lighting, Pedestrian Ramps, Crosswalk

Number of key destinations (Bank, Post Office, Childcare Center, Grocery Store, Medical Center, Office Park, Pharmacy, Place of Worship, Public Library, Public Park, School, University or College):

Within 1/4 mile of project*	4-6
Within 1/2 mile of project*	7

Bridge/culvert projects (if applicable)

Current Bridge/Culvert No.	0
New Bridge/Culvert No.	0

Structure is over/under (Bridge or Culvert Name):

Project Funding

Are you applying for competitive funds from another source(s) to implement this project?*

No

Grant Request Amount, US$*	$377,000.00
Project Total: $*	$377,000.00

Match Amount: $ (Minimum of 20% of the project total for federally funded projects; no match for Active Transportation regional sales tax-funded projects)

Match Amount: $0.00

Match Percentage (Minimum of 20% for federally funded projects, no match required for Active Transportation Sales Tax-funded projects)

Match percentage: 0%

Source of Match Funds (For federally funded projects, a minimum of 20% of the total project cost must come from non-federal sources; additional match funds over the 20% minimum can come from other federal sources)

Source of Match Funds*	City Local Funds
Please check the years that are feasible for your program.*	2027 (Federal and Active Transportation Sales Tax Projects), 2028 (All projects), 2029 (All projects)

Active Transportation applications will need to complete the Total Project Cost Worksheet (attach this worksheet in the application documents) AND also complete the Fluxx Budget tool below (Click on the Edit button in the "What is the grant amount requested for each activity?")

To provide the required budget information, complete the Total Project Cost Worksheet and then upload into the Documents section. Refer to the Total Project Cost Instructions for instructions on what to submit in Fluxx.

Read and Complete the Total Project Cost Worksheet Instruction and fill out the worksheet. After you have completed the worksheet then enter the costs from the Grant Request Amount column into Fluxx Budget Tool. You will need to enter all line items with associated costs, but only from the **Grant Request Amount column**.

- If you have “Other Bicycle and Pedestrian Elements” in your budget, you will be required to provide a description of the line item by replacing the Line Item text with your description.
- There is no local match. Therefore, it is possible your Total Project Cost will be equal to the Grant Request Amount. However, if your Total Project Cost exceeds the maximum award for the category, the entire cost must be identified in the Total Project Cost Worksheet.

The information entered into Fluxx should match your budget included in the attachments. This is how you will make claims against your grant award.

As part of this application process, you must enter your project location(s) information into our Geographic Information System (GIS) via the link below.

The GIS link is not generated until a project name has been added to the question “Project Name” above and the application has been saved. For multiple locations, you will refresh the window to add additional locations. If you make a mistake, please refresh and add the correct location and add a comment describing the error and correction. The project location(s) are used to determine some of the outcomes below. Please note that it may take several minutes for the GIS data to be populated in the application below.

Please click the following link which opens in a new window: Draw Project Location

I acknowledge that I clicked the GIS link and entered the required information.	Yes

▼ Document Requirements

Instructions

Upload a PDF for the applicable project elements listed below. Multiple files can be uploaded with the attachment link below. Each individual attachment must be saved as an 8.5’’X11’’pdf and cannot be more than 15 pages in length to be considered. Only pdf files that meet the size and length limits will be accepted. Please do not submit entire plans or studies.

Summary

1. Applicants are required to submit a one-page Project Summary to be used by the scoring committees and TAB members. This one-pager may include the project name, applicant, route, a map, township/city/county where project is located, requested award amount, total project cost, before photo, project description, list of

project benefits, or other pertinent information.
2. A Photograph from within the past year showing the Existing Conditions within the project area. If awarded funds, this photograph will be utilized in the Metropolitan Council's online mapping tool to show a before-and-after comparison of the improvement. By submitting the application, the applicant agrees to allow the Council to use this photograph. Applicants should not use copyrighted images from other sources.

Maps

1. All infrastructure projects must include a map or concept drawing of the proposed improvements that clearly labels the beginning and end of the project, all roadways in the project area, roadway geometry, and any bicycle, pedestrian, and transit components anticipated upon completion of the project.

Coordination

1. The applicant must include a letter of support from the agency that owns/operates the facility, will operate the transit service, or will be expected to maintain the project (if different than the applicant) indicating that it is aware of and understands the project being submitted, and that it commits to operate and maintain the facility for its design life.
2. Transit applicants that propose a project that begins or ends within another agency's service area must include a letter of support from the other transit agency.
3. If the applicant expects any other agency or competitive grant program to provide part of the local match, the applicant must include a staff-level letter from the other agency agreeing to financially participate/documentation of the competitive award.

To add a document, select the green plus sign on the far right of the screen in the row below. A new screen will appear. Upload files by selecting Add files on the bottom left of the screen. After all files have been added, select Start Upload. (Note: if you need to add more files to the same group of attachments, use the green + button in the "Documents" section at the bottom.)

▼ Documents

To add other documents, click the green + sign, then click "Add Files." Then select the document category from the dropdown and click "Start Upload"

▼ Qualifying Requirements

The applicant must show that the project meets all the qualifying requirements to be eligible to be scored and ranked against other projects. All qualifying requirements must be met before completing an application.

By selecting each checkbox, the applicant confirms compliance with the following project requirements*

The project is consistent with the goals, objectives, policies, and actions of the 2050 Transportation Policy Plan
Briefly list the applicable 2050 TPP objectives and policies.

Briefly list the applicable 2050 TPP objectives and policies*

Objectives:
Historically disadvantaged communities are better connected to jobs, education, and other opportunities.
We better meet the transportation needs of people who have disabilities or limited mobility.
People do not die or face life-changing injuries when using any form of transportation.
People feel safer, more comfortable, and more welcome when using any form of transportation.
People are better connected to community and cultural resources that support their physical, emotional, and mental well-being.
People can increase physical activity with more opportunities to walk, roll, or bike.
People have better travel options beyond driving alone to meet their daily needs, with a focus on improving travel times, reliability, directness, and affordability.
The region's transportation system minimizes its greenhouse gas emissions.
People have more reliable access to zero emissions vehicle infrastructure.
The region's transportation system protects, restores, and enhances natural systems (for example, air, water, soil, vegetation, and habitat quality).

Policies:
Ensure communities and investments meet federal Americans with Disabilities Act (ADA) standards and encourage partner government agencies to go above minimum standards to fully meet the needs of people who have a disability in infrastructure, services, communication, and engagement.
Evaluate processes, policies, programs, and plans to ensure that community benefits and burdens from transportation investments are distributed equitably.
Plan for and invest in transportation facilities that are context-sensitive and are high quality and comfortable for all users.
Work to eliminate fatalities and serious injuries from traffic crashes and incidents on the transportation system by 2050 using the Safe System approach.
Emphasize and prioritize the safety of people outside of vehicles in the transportation right-of-way.
Provide safe, secure, and welcoming transit facilities for all users.
Plan and implement a complete bicycle system including local networks that connect to the Regional Bicycle Transportation Network alignments to provide connections between regional destinations and local bicycle networks.
Identify, prioritize, and improve locations where network gaps or physical barriers (like rivers, freeways, and rail corridors) may impede non-motorized travel.
Implement a Complete Streets approach in policy, planning, operations, and maintenance of roads.
Provide transportation options and transit advantages on roadway corridors with delay and travel time reliability issues.
Prioritize projects that reduce vehicle miles traveled through sustainable transportation options.

Check the box to indicate that the project meets the requirement above.* Yes

---

The project or the specific transportation problem/need that the project addresses must be in a local planning or programming document completed within the last 10 years. Reference the name of the comprehensive plan, regional/statewide plan, capital improvement program, corridor study, Safe Routes to School Plan, Bicycle System Plan, or other approved/adopted plan or program of the applicant agency. The Active Transportation Planning application category (whose projects will be creating the plan itself) is exempt from this requirement.

Check the box to indicate that the project meets the requirement above.* Yes

---

List the applicable document(s) and pages*

Fridley Active Transportation Plan page 47

The project complies with the Americans with Disabilities Act (ADA).

Check the box to indicate that the project meets the requirement above.* Yes

---

The project must be accessible and open to the general public.

Check the box to indicate that the project meets the requirement above.* Yes

---

The owner/operator of the facility must operate and maintain the project year-round for the useful life of the improvement. This includes assurance of year-round use of bicycle and pedestrian facilities per state statute 473.4465 Subd. 3(7). All bicycle and pedestrian applications must include information on how the requirement to maintain facilities for year-round use will be met. This information may include:

- A local ordinance or policy that requires abutting property owners to maintain pedestrian or bicycle facilities, or that directs agency staff to maintain pedestrian and bicycle facilities.
- A letter or resolution that confirms the proposed local facility will be maintained by agency staff or abutting private property owners.
- A cross-jurisdictional agreement with another agency to maintain the proposed local pedestrian or bicycle facility.

Check the box to indicate that the project meets the requirement above.* Yes

---

The project must represent a permanent improvement with independent utility. The term "independent utility" means the project provides benefits described in the application by itself and does not depend on any other construction elements to be delivered for the proposed project to be achieved.

Check the box to indicate that the project meets the requirement above.* Yes

---

The project applicant has sent written notification regarding the proposed project to all affected units of government prior to submitting the application. Staff-level letters of support are required if another agency owns the roadway, will deliver the transit service, will contribute financially to the project, will be expected to sponsor the project, or will be expected to maintain the project. Transit projects proposing a project that crosses into another agency's service area must include a letter of support from all relevant transit agencies.

Check the box to indicate that the project meets the requirement above.* Yes

---

The Metropolitan Council and the Transportation Advisory Board (TAB) get the first opportunity to utilize a share of the greenhouse gas and vehicle miles traveled offsets of any awarded federal or active transportation regional sales tax projects proportionate to the share of the total project cost funded by TAB to fulfill state requirements for the Greenhouse Gas Impact Assessment (MN Statute 161.178) enacted in 2023. Each offset can only be used one time. If the projects are not needed by the Metropolitan Council and TAB as offsets to other awarded Regional Solicitation highway projects, ownership of them will revert, in whole or in part, to the original project sponsor. Based on inputs provided in the application, Met Council staff will calculate the magnitude of the offsets.

Check the box to indicate that the project meets the requirement above.* Yes

---

The applicant agrees to provide Metropolitan Council staff with post-construction data, as requested, in order to perform before-and-after analyses.

Check the box to indicate that the project meets the requirement above.* Yes

---

Applicant is a public entity (e.g., county, city, tribal government, transit provider, etc.), or non-profit organization in the TDM category only. Applicants for federal funds that are not State Aid cities in the seven-county metro area with populations over 5,000 must contact the MnDOT Metro State Aid Office prior to submitting their application to determine if a public agency sponsor is required.

Check the box to indicate that the project meets the requirement above.* Yes

---

The public agency sponsor must either have a current Americans with Disabilities Act (ADA) self-evaluation or transition plan that covers the public right of way/transportation, as required under Title II of the ADA. The transition plan must be completed by the local agency before the Regional Solicitation application deadline.

Choose one*	The applicant is a public agency that employs 50 or more people and has a completed ADA transition plan that covers the public right of way/transportation.
Date plan completed by governing body*	2/11/2019
Link to plan*	https://www.fridleymn.gov/files/assets/city/v/2/public-works/documents/adopted-february-2019-city-of-fridley-ada-transition-plan.pdf

All projects that are located within right-of-way occupied by an active railroad must confirm that the railroad has been engaged in project planning.

Check the box to indicate that the project meets the requirement above.*	Yes

All projects must relate to surface transportation. Surface transportation is defined as primarily serving a commuting purpose and/or that connects two destination points. A facility may serve both a transportation purpose and a recreational purpose; a facility that connects people to recreational destinations may be considered to have a transportation purpose.

Check the box to indicate that the project meets the requirement above.*	Yes

Projects must exclude right-of-way acquisition costs. Projects within these categories are eligible to include costs for studies, preliminary engineering, design, or construction engineering.

Check the box to indicate that the project meets the requirement above.*	Yes

▼ Prioritizing Criteria and Measures

2050 TPP Goal: Our Region is Dynamic and Resilient

Category Definition: The Local Bicycle Facilities application category is intended to fund construction of and improvements to bicycle facilities that are identified in a local or regional plan. Projects may be identified as Regional Bicycle Transportation Network alignments or Regional Trails or may be local in nature.

This application contributes to these 2050 TPP Objectives or Policies:

- People have better travel options beyond driving alone to meet their daily needs, with a focus on improving travel times, reliability, directness, and affordability.
- People do not die or face life-changing injuries when using any form of transportation.
- People can increase physical activity with more opportunities to walk, roll, or bike.

Selected projects in this category will be funded through the Regional Active Transportation Sales Tax, and as such, project selection must be based on:

1. Project's inclusion in a municipal or regional nonmotorized transportation system plan;
2. Extent to which policies or practices of the political subdivision encourage and promote complete streets planning, design, and construction;
3. Extent to which the project supports connections between communities and to key destinations within a community;

4. Identified barriers or deficiencies in the nonmotorized transportation system;
5. Identified safety or health benefits;
6. Geographic equity in project benefits, with an emphasis on communities that are historically and currently underrepresented in local or regional planning; and
7. Ability of a grantee to maintain the active transportation infrastructure following project completion.

The qualifying and scoring criteria for this category are designed to address these seven state requirements.

Please note that this list is not exhaustive and is intended only to provide examples. For questions regarding project eligibility, see the qualifying requirements for this application category and contact the Metropolitan Council.

- Multiuse trails or shared-use paths
- On-street or separated bicycle facilities
- At-grade or grade-separated bicycle crossing improvements or connections
- Filling multiple gaps, improving multiple crossings, or making other similar improvements along a corridor
- Elements that support bicycling (such as bike rack installation, bicycle repair stations, benches, wayfinding, etc.) may be included as part of a construction project, but are not eligible as standalone projects

▼ Evaluative Criteria

1. Complete Streets

This criterion measures the extent to which the applicant encourages or promotes complete streets planning, design, and construction in direct response to one of the statutory funding requirements.

Measure A Complete Streets Planning, Design, and Construction

If applicable, provide a link to the applicant agency's complete streets policy, or another document that provides information on the agency's practices.

If you do not have a link, please attach your complete streets policy in the Documents section below.

Agencies or organizations without roadway ownership or jurisdiction may include the community's local ordinance or policy where the project is located and describe how the project would support advancing complete streets in this community*

https://www.fridleymn.gov/files/assets/city/v/1/community-development/documents/active-transportation-plan-final-no-watermark_202103221150069478.pdf

Additionally, provide a description (400 words or less) of ways the agency encourages or promotes complete streets planning, design, and construction as part of its operations and how those practices will be applied to the project.*

The City's Active Transportation Plan (ATP) has stated goals including "improve the connectivity of the city by constructing active transportation infrastructure" and "integrate living streets concepts into reconstruction and development projects". The adopted ATP establishes Fridley's Living Streets Policy on page 18, which includes both complete streets and environmental considerations to guide modern roadway design and identify key components like trails, safe crossings, and road diets as well as potential stormwater treatment and native landscaping opportunities. To ensure implementation, the Policy requires that a Living Streets worksheet be completed by all project managers during the design of any construction, reconstruction or rehabilitation project to identify opportunities for living/complete streets components. Over the past decade, the City has implemented this policy by reducing roadway widths; transitioning vehicle lanes, parking lanes, or shoulders into trails; and adding bio-swales, rain gardens, and trees on multiple initiatives including the West Moore Lake Drive Project, the 69th Avenue Project, the 7th Street Project, the 53rd Avenue Project, the Safe Routes to Schools Project, and the University Avenue One-Way Conversion Project. The development of these projects includes a high level of engagement with the public to understand Active Transportation goals.

In this project, the City proposes to utilize existing, unpaved right-of-way for an eight-foot trail with a two-foot paved clear zone due to Anoka County's (the roadway owner) design guidelines. The City will also utilize complete street principles such as tightening the corner radii at the intersection of East River Road and Rice Creek Way, improving lighting at the Rice Creek Way intersection and improving the crosswalk visibility.

Measure A Scoring Guidance

Consider the information and narrative provided by the applicant and rate projects based on the benchmarks provided below. Projects may score at any point along the scale based on their performance against the stated criteria. For agencies or organizations without roadway jurisdiction, scores should be based on the community policy in which the project is located. These applications may score higher if the applicant organization demonstrates a commitment to complete streets principles in their activities beyond the local community the project is located.

- High: The highest rated projects in this measure will be from agencies that have a strong adopted complete streets policy and show how the applicant generally encourages and promotes the use of complete streets principles as part of its operations. This may include citing specific requirements, practices, and examples. For agencies or organizations without roadway jurisdiction, consider the local community's policies or practices where the proposed project is located. Agencies without an officially adopted complete streets policy may score highly with a strong narrative response that demonstrates how they employ similar practices as an organizational priority.
- Medium-High
- Medium: Mid-range projects in this measure may be from agencies that have an adopted complete streets policy, but the policy may lack specifics, or the agency does not cite evidence for how they encourage and promote complete streets on a daily basis. This may include a lack of specific examples. For agencies or organizations without roadway jurisdiction, consider the local community's policies or practices where the proposed project is located.
- Medium-Low
- Low: Agencies that do not have an adopted complete streets policy and make minimal effort to follow complete streets principles should be rated low. For agencies or organizations without roadway jurisdiction, consider the local community's policies or practices where the proposed project is located.
- Non-responsive/Not relevant: Agencies that do not have an adopted complete streets policy and do not provide evidence for how the applicant generally follows complete streets principles should receive zero points for this measure.

---

2. Connection to Key Destinations

This criterion measures the project's ability to serve a transportation purpose by connecting users to key local destinations.

Measure A - Connection to key destinations

Attach a map that clearly identifies key destinations within ½ mile of the project limits. Key destinations may include destinations important to the local community, including (but not limited to) banks, post offices, high-frequency transit stations, childcare centers, grocery stores, medical centers, office parks, pharmacies, places of worship, public libraries, public parks, schools, universities, or colleges. Other destinations may be included with an explanation as to their importance to the local community.

Upload that map, along with a written response (300 words or less) that highlights the key destinations served and their importance to the local community. Applicants may identify additional destinations up to 1 mile from the project location but will need to demonstrate that these destinations have a continuous bicycle facility connection to ensure safe access from the project location. These destinations must be clearly marked outside of the ½ mile buffer for this criterion.

If the project does not directly serve any key destinations but facilitates an important connection to a destination more than ½ mile from the project, please explain.

This project will significantly increase access to key destinations by providing a trail facility along East River Road (a Tier 1 RBTN alignment) where there is currently no bicycle or pedestrian infrastructure. This will fill a gap along East River Road from the existing Mississippi River Regional Trail which turns into a neighborhood at Rice Creek Way to the Mississippi Street trail (a RBTN Tier 1 alignment that is currently under construction). This trail will improve access to parks along the river including Manomin Park where there is a fishing pier, river access and trail system. Additionally, this trail will allow for a continuous, grade separated route to Stevenson Elementary, located a little over ½ mile from the project area. The project will also provide a direct connection to a bus stop for Route 827 which travels from downtown Minneapolis to the Northtown transit station. With the completion of the Mississippi Street trail this year, the trails will also provide a continuous connection to multiple churches, a daycare, and Proposed F Line BRT stops which will run at an increased frequency from Route 827.

Measure A Scoring Guidance

Consider the information and narrative provided by the applicant and rate projects based on the benchmarks provided below. Projects may be rated at any point along the scale based on their performance against the

stated criteria.

- High: The highest rated projects in this measure will make a strong case about how the project will significantly increase access to key destinations. This may include providing new connections and/or improvements to existing connections. The narrative should also explain why the destinations are critical to the community and/or region. Destinations beyond ½ mile should be considered only if the respondent clearly demonstrates a safe connection from the project location to the identified destination.
- Medium-High
- Medium: Mid-range projects in this measure may minimally increase access to key destinations by only connecting to a few destinations and/or providing small improvements to existing connections. Differentiation among these projects should consider how many destinations are connected, the importance of the destinations to the community and/or region, and the level of increased access as provided in the narrative. Destinations beyond ½ mile should be considered only if the respondent clearly demonstrates a safe connection from the project location to the identified destination.
- Medium-Low
- Low: Projects that have minimal destinations within the project area or do not create safe connections to those destinations should receive minimal points for this criterion. Consider whether the project adds new connections and/or improves existing connections when making this assessment.
- Non-responsive/Not relevant: Projects that do not create any new connections, do not have any destinations within the project area, or do not provide adequate information should receive zero points for this measure.
- Non-responsive/Not relevant: Projects that do not create any new connections, do not have any destinations within the project area, or do not provide adequate information should receive zero points for this measure.

Measure B - Connection to K-12 schools

Projects that improve safe connections to K-12 schools are eligible for additional points as a way to continue implementing the principles of providing Safe Routes to Schools.

Select all that apply*

This project does not provide a direct or indirect connection to a K-12 school.

Measure B Scoring Guidance

Consider the information provided by the applicant and rate projects based on the guidance provided below.

- 5 points: Project provides a direct connection to a K-12 school.
- 3 points: Project provides an indirect connection to a K-12 school
- 0 points: Projects that are not within 1/4 mile of a K-12 school will also receive zero points.

Measure C - Active Transportation Demand

Identify the project location's score on MnDOT's Suitability for the Pedestrian and Cycling Environment (SPACE) tool (https://mndotspace.mn.gov/). This score measures the location's estimated latent demand for active transportation based on a variety of environmental, physical and demographic factors.

Use the SPACE tool to roughly draw the project alignment or location using the drawing tools. Then, upload a screenshot of the SPACE tool showing the calculated score.*
Measure C Scoring Guidance

The applicant with the highest SPACE score will receive the full points available to this measure. Remaining projects will receive a proportionate share of the full points. For example, if the application being scored showed a SPACE score of 50, and the top project had score of 75, this applicant would receive (50/75) * 5points, or 3.33 points.

---

3. Identified Gaps, Barriers, or Deficiencies

This criterion measures the project's contribution toward creating a connected, accessible, and comfortable active transportation network. Projects will be scored based on a tiered system that prioritizes filling network gaps.

Measure A - Gaps, barriers or deficiency addressed

Select all that apply*

This project fills a network gap or improves a barrier by constructing a new facility that connects to other existing bicycle facilities or a community destination and serves users of all ages and abilities., This project addresses a system barrier or deficiency by constructing crossing improvements or increasing separation from motor vehicles on an existing facility to increase comfort and safety on the active transportation system.

Please provide a written response (300 words or less) that explains the ways this project addresses a gap, barrier, or deficiency on the existing system.*

This project fills an existing critical, high-risk gap in the City's transportation network since there are currently no trails or sidewalks along East River Road in this section. As a result of this deficiency, bicyclists travel in the roadway's shoulder which transitions to a right-turn lane in the northern section of the project area and creates a conflict point for bicycles and vehicles. Additionally, due to the heavy roadway volume, the shoulder accumulates significant debris that poses a risk to bicyclist safety. Pedestrians must either walk on the shoulder or the unpaved right-of-way behind the curb which is not accessible, is not maintained in the winter, and contains a significant number of signs. East River Road has a posted speed limit of 40 miles per hour, but there is excessive speeding which was identified during the public feedback section of the City's Safe Streets for All development as well as through consultation with Fridley Public Safety Department. Currently, transit riders who wait at Stop #12143 must stand in the grass. During the winter, this area serves as snow storage area for snow cleared from East River Road. Since the adjacent roadway segment is a right-turn lane, transit riders must stand on the snowbank while waiting for the bus during the winter months.

Measure A Scoring Guidance

Scoring for this measure will be based on the tiered system listed below. Consider the information and narrative provided by the applicant and score projects based on the benchmarks provided below. Scores will be based upon the scorer's discretion and the information provided in the written response, with the option to provide reduced points if the scorer does not believe the gap, barrier or deficiency cited is adequately addressed to a level that makes the facility comfortable for all ages and abilities. Projects that checked multiple boxes will receive the highest tier of points that is adequately supported by the applicant's response.

- 25 points: Project fills a network gap or barrier by constructing a new facility that connects to other existing facilities or a key community destination.
- 20 points: Project addresses a system barrier or deficiency by constructing crossing improvements or increasing separation on an existing facility.
- 15 points: Project constructs a new bicycle facility but does not currently connect to another existing facility.
- 10 points: Project addresses a deficiency by improving facility condition but no additional improvements are anticipated.

---

4. Safety

This criterion measures the project's ability to promote safety for all users, including how the project responds to existing risks and makes use of proven safety countermeasures.

Measure A – Connection to existing safety planning efforts

Project Location (or part of the location) is listed in the Regional Safety Action Plan on any of the following lists (*note an online map is being developed and a link will be provided in final application*)**:**

Crash Risk Index >15, Location is listed in another safety plan that prioritizes reducing fatal and serious injury crashes.

Please describe and provide reference or link to the plan.*

This section of East River Road is listed as having a higher risk (15-24.9) on the Regional Solicitation Data Analysis Map. Additionally, The City is currently developing a Streets for All Plan through the Federal Highway Administration's (FHWA) Safe Streets for All (SS4A) grant program. The City's consultant has completed the safety analysis portion of the project using the Safe Streets for All f framework which is included in the draft

report at www.FridleyMN.gov/StreetsForAll. The project area is included in the City's High Injury Network and High Risk Network (page 12, Figure 8; page 16, Figure 16 respectively). Overall, the project area was scored in the highest priority percentile range of roadways in the City for improvement based on safety and equity needs (page 24, Figure 20). Two minor injury crashes and one fatal injury crash have been reccorded in the project area within the past five years.

Measure A Scoring Guidance

The project will be scored based on the scorer's discretion, using the following guidance:

- High: Project is identified in the regional safety action plan on either the regional top 25 or county top 10 lists or project provides a viable parallel or alternative route to a location listed.
- Medium-High
- Medium: Project location is identified in a regional safety action plan on High Injury Streets or Crash Risk Index, or project provides a viable parallel or alternative route to a location listed.
- Medium-Low
- Low: Project location is identified in a local (e.g. county or city) safety action plan, local or district Safe Routes to School plan, or project has a completed targeted study (e.g., NEPA document, corridor study, intersection study, ICE report, etc.) that identifies the specific safety measures needed to improve safety and those safety measures have been incorporated into the proposed project or project provides a viable parallel or alternative route to a location listed or project provides a viable parallel or alternative route to a location listed.
- Non-responsive/Not relevant: Projects that are not identified in the Regional Safety Action Plan or any local safety plan. This could also include projects that also have not completed a targeted study that defines an existing safety issue (e.g., NEPA document, corridor study, intersection study, ICE report, etc.)

Measure B – Safety improvements for people outside of vehicles

Please provide a written response that explains how the project will mitigate existing risk factors noted above and any other steps taken to ensure the project promotes safety for all users. Please cite any specific proven safety countermeasures that will be part of the project's design or methods the project will use to promote safety for people outside of vehicles (600 words or less).

Consider the following when developing your response. Note that not all considerations are applicable to all projects, but please respond to those that are applicable.

- Will crossing distances or times between protected crossings for people outside of vehicles be increasing or decreasing? If so, how many locations will be affected? If increasing, what measures will be considered to recognize the increase in distance between crossing opportunities?
- Describe what measures are being used to reduce exposure and delay for people outside of vehicles.
- If grade separated pedestrian crossings are being added and increasing crossing times, describe any features that are included that will reduce the detour required of pedestrians and make the separated crossing a more appealing option.
- If mid-block crossings are restricted or blocked, explain why this is necessary and how pedestrian crossing needs and safety are supported in other ways.
- Describe how motorist speed will be managed in the project design, in both through-traffic and turning movements. Note any strategies or treatments being considered that are intended to help motorists drive slower or protect pedestrians and bicyclists if motorist speeds will increase.
- Consider these resources for safety improvements: Regional Safety Action Plan's Programmatic Recommendations, FHWA's Safe System Roadway Design Hierarchy, and MnDOT's Traffic Engineering Countermeasures

This project proposes to improve safety for pedestrians and bicyclists by providing a dedicated, grade-separated facility along a high-risk roadway. Currently, pedestrians and bicyclists must utilize the shoulder/right-turn lane, which has a high level of exposure and potential for conflicts with turning vehicles, or the unpaved right-of-way which is not accessible. In addition to improving safety and comfort by providing a dedicated travel space, this project will also reduce travel delay since pedestrians and bicyclists will no longer have to yield to vehicles or find alternate routes. Installing sidewalks to avoid walking along roadways (CMF 1333) has a Crash Reduction Factor of 75%. The project will also improve the safety of transit riders waiting at Stop #12143 since they will be able to wait in a visible, grade- separated location that is maintained in the winter. Additionally, the City will have an LED light fixture installed on an existing pole at the bus stop where there is currently no lighting and will seek similar opportunities to implement additional lighting additions to the corridor. The City's safety analysis determined that 56% of nighttime vulnerable user crashes result in fatal or serious injuries. Intersection lighting (CMF 4462) has a Crash Reduction Factor of 12%. The project also proposes improving the visibility of pedestrians and bicyclists crossing Rice Creek Way by tightening curb radii. Curb extensions/reduced corner radii have a Crash Reduction Factor of 30%. The curb extension will also improve safety by slowing vehicular traffic turning onto Rice Creek Way. As part of this project, the City will also

stripe the intersection at Rice Creek Way, which is currently unmarked, with a crosswalk to bring greater awareness of the potential for pedestrians and bicyclists. The project will also install a permanent speed feedback sign on East River Road to help slow the speed of both through traffic and traffic turning onto Rice Creek Way that could potentially conflict with trail users. There are currently no speed feedback signs along East River Road in Fridley. Guidance from the County Road Safety Plan updates suggests that these signs can result in an approximately 5-7% reduction in crashes on urban segments.

Measure B Scoring Guidance

Consider the information and narrative provided by the applicant and rate projects based on the benchmarks provided below. Projects may be rated at any point along the scale based on their performance against the stated criteria.

- High: The highest rated projects in this criterion will serve the needs of pedestrians and bicyclists with the greatest safety and least pedestrian and bicyclist delay, detour, or discomfort. Score projects higher if selected countermeasures are designed to be comfortably used by people of all ages and abilities. The highest scoring projects will provide frequent, safe, at-grade crossing opportunities to prioritize directness and convenience with safety. Score projects higher if design elements are included to help motorists drive slower. The response will include quantitative or qualitative metrics showing a high level of improvement using an established methodology.
- Medium-High
- Medium: Mid-range projects in this measure may make a strong case as to how the project improves the travel experience, safety, and security for people outside of vehicles but without quantitative data or using a less established methodology. These projects may require lengthy detours or elevation changes or have less frequent at-grade crossings that do not align well with destinations. Similarly, mid-range projects may have quantitative or qualitative data and an established methodology but only offer a small improvement to the multimodal experience.
- Medium-Low
- Low: Projects that make minimal improvement to the travel experience, safety and security for people outside of vehicles should receive low points in this measure. These projects may include motor vehicle design elements that raise concerns for pedestrian and bicyclist safety, such as increased vehicle speeds or increased crossing distances that would not be fully mitigated by any safety countermeasures for pedestrians and bicyclists.
- Non-responsive/Not relevant: Projects that do not improve the travel experience and safety for people outside of vehicles should receive zero points for this measure.

▼ Community Considerations

The Regional Solicitation Community Considerations criterion draws on multiple Metropolitan Council and Transportation Advisory Board (TAB) policies, including:

Imagine 2050 and Transportation Policy Plan (TPP) Goal: Our region is equitable and inclusive. Racial inequities and injustices experienced by historically marginalized communities have been eliminated and all people feel welcome, included, and empowered.

Imagine 2050 Equity Statement: Equity means that historically excluded communities – especially communities of color – have measurably improved outcomes through an intentional and consistent practice of adapting policies, systems, services, and spending so that they contribute to the repair of both historic and ongoing injustice.

Imagine 2050 contains an Equity and Environmental Justice Framework, which is a people-centered approach that should guide regional processes and actions to work toward a more equitable region. A description of the framework is linked here Imagine 2050: Regional Vision, Values, Goals - Revised for Adoption. The three components of the framework include:

- A people-centered, data-driven decision-making approach
- Prioritized engagement with overburdened communities
- Provision of benefits to the communities that go beyond harm mitigation

TPP Policies or Objectives: TPP Policies and Objectives related to achieving the regional equitable and inclusive goal include:

- Conduct engagement activities and implement shared decision making with historically underrepresented communities throughout policy making, planning, and project development to ensure equitable distribution of the benefits and burdens of transportation investments.
- Evaluate processes, policies, programs, and plans to ensure that community benefits and burdens from

transportation investments are distributed equitably.
- Implement investments that repair harms and impacts to historically disadvantaged communities from past highway investments.
- Implement strategies against gentrification and displacement caused by transportation investments.

TAB Communities to Consider: Beginning with the Regional Solicitation redesign in 2014, the Transportation Advisory Board has identified “specific communities” that should be prioritized in transportation decision-making processes: people of color, Indigenous people, low-income, disabled, youth and older adult populations. These specific communities should be engaged and empowered in transportation decision-making processes, and projects should be developed to specifically address their transportation needs.

Metropolitan Council staff have provided an interactive map that can be used to understand the composition of the communities of consideration within your project area. This map can serve as a basis for your response to each measure but applicants are encouraged to provide additional detail and understanding of community.

Other Key Concepts

Community Definition: For the Community Considerations scoring criterion, “community” is defined as people and groups of people who are adjacent to and/or impacted by the proposed project. This includes those who live, work, attend school, or access essential destinations (such as healthcare, shopping, or services) within the project area. Prioritized consideration is given to communities of color, Indigenous communities, low-income, disabled, youth, and older adult populations. The term “community” does not include transportation system users who only travel through the area without connecting to destinations within it. Transit users and others outside personal vehicles may be considered part of the community if their trips begin, end, or include stops within the project area.

Scoring: Three qualitative measures are used for the Community Considerations criterion as described below. Applicants will receive a High, Medium/High, Medium, Medium/Low, or Low rating for each of the three measures: (1) Community Data and Context, (2) Community Needs and Future Engagement, and (3) Community Benefits.

Funding Priority: Projects receiving a high score on each of the three measures, if any, will be considered for funding priority. Up to one (1) project from each solicitation round that was not otherwise selected for funding will be recommended for full funding in either the Roadway, Bike/Ped, Transit, or Environment categories.

Applicant Training Opportunities: The Met Council will provide optional yearly trainings for local agency staff to build their understanding of the Community Considerations criterion and measures. This training will also be centered around best practices set forth by the Council’s Equity Evaluation of Regional Transportation Investment Processes study.

Community Considerations Scoring: Scorers for the Community Considerations criterion will be selected based upon their experience and knowledge in community work, will have completed the Community Considerations training, and will meet multiple times as a group of scorers to discuss and agree upon scoring expectations. Projects recognized as a funding priority will be reviewed and agreed upon by all Community Considerations scorers. 2-3 Community Considerations scorers will be assigned to each project application.

This criterion measures the project’s ability to ensure the needs of specific populations are considered and prioritized in transportation decisions.

A. Community Data and Context

Describe the project area’s community data and context* including locations of specific communities and important regional and local destinations those community members access regularly. Relate the community data to the project purpose. Supplement widely available demographic data with community-specific information via additional maps or descriptions. Include any transportation history impacting the communities and intentional or unintentional past and ongoing harms caused by the transportation system (600 words or less).*

*Examples of detailed community data: demographics (race, ethnicity, age, low income, disabled), affordable housing locations, essential services, employers/job centers, schools, cultural resources, places of worship and social destinations.

The East River Road Trail Gap Project serves community members by providing a safe, direct connection between the Mississippi River Regional Trail and the new Mississippi Street Trail. Many bicyclists travel along this corridor as the most direct route to reach parks along the River. Many transit riders use this area to reach Route 827 bus stops. In 2012, Anoka County completed a corridor study of East River Road which established a vision that “the cities of Fridley and Coon Rapids, with Anoka County, will develop a safe and visually appealing corridor, one that embraces the residential feel and natural environment in the area, and provides for

effective pedestrian, bicycle, and transit connections." Currently, the roadway is far from achieving this vision due to its car-focused design and lack of pedestrian and bicyclist infrastructure. These deficiencies are exacerbated in the winter when snow storage accumulates within the path taken by pedestrians and transit riders, forcing them to crawl over icy snowbanks to reach their destination.
There is an 11-unit apartment building directly along the project route and a 141-unit apartment complex across the street. Both apartments have units listed that are affordable to residents making 50% of the Area Median Income. Families within and to the north of the project area are zoned to Stevenson Elementary School at East River Road and 61st Avenue, a little over ½ miles from the project area. Connectivity along East River Road is listed as a significant barrier to walking and biking to Stevenson Elementary School within their Safe Routes to School plan. This project connects to an existing sidewalk along East River Road from Mississippi Street south to Stevenson Elementary School, located a little over ½ mile from the project to provide a through connection all the way to the school's northern attendance area boundary.

The project serves a diverse neighborhood: the adjacent neighborhood census block (2018) is mapped as 40% non-white. The adjacent block group (511.01 Block Group 2) is mapped as 40% low/moderate income and the block group across East River Road is mapped as 79% low/moderate income by the U.S. Department of Housing and Urban Development. The trail will directly connect to the Mississippi Street and University Avenue Trails, providing access to essential services such as a pharmacy, shopping, places of worship, a daycare and more.

Applicants will receive a High, Medium/High, Medium, Medium/Low, or Low rating for each of the three measures. The expectations should be considered as cumulative, i.e., Medium builds on Low; High builds on Medium. Scoring via this rubric will be based exclusively on the application materials provided.

High: The project application:
- has granular, neighborhood-scale data and context on specific communities
- identifies cultural assets & significant sites validated by the communities (e.g., this community of low-income residents expressed a need to be able to walk to a health care destination)
- Describes any past and present transportation harms to community
- Has data on cultural history of communities

Medium: The project application:
- Has local maps and/or description beyond census data
- Has granular data or maps (e.g., knowledge of a concentration of a large youth population in this neighborhood or location)
- Identifies affordable housing locations and areas of low-income
- Links data to project purpose
- Identifies past system burdens.

Low: The project application:
- Include general census data on "specific communities," (e.g. "community has x% low-income population, versus the regional average of y%")
- Has a basic list of important destinations without demonstrating local knowledge
- Has a project area community description but lacks community insight or context

B. Community Needs and Future Engagement

Describe how the project was identified, and how it addresses a community need. Community needs may be identified through long-range or strategic planning, community surveys, formal or informal meetings and conversations with community members or neighborhood groups, outreach, and other means. Describe any discussion with specific communities, and how it contributed to identifying the project need. Describe how community engagement will occur throughout the project. Reference the engagement spectrum on page 55 of the Imagine 2050 Regional Vision, Values, and Goals chapter of the Regional Development Guide. Describe and link (if possible) documented organizational structures that support future engagement on the project; these structures could include policies, procedures, financial or staff resources, or other documents (600 words or less).*

Bicycle and pedestrian facilities along this section of East River Road were included in the City's network of streets designated for trail/sidewalk in the City's first Active Transportation written in 2013. The City performed extensive outreach via digital and in-person methods to update this plan in 2020. Under the 2nd edition plan, East River Road was listed as a focus route based on a scoring rubric. The City is currently developing a system-wide transportation plan through a Safe Streets For All grant from FHWA. As part of that process, residents have had opportunities to comment on the City's transportation system through an online map and an in-person open house. The City received multiple comments regarding the lack of pedestrian and bicycle facilities in this segment. This public feedback combined with the identification of this section of East River Road as one the highest scoring segments within the Safety Analysis prompted staff to undertake this

application. Additionally, Anoka County's East River Road Corridor Study, which was completed in 2012 sets a vision that the corridor "provides for effective pedestrian, bicycle, and transit connections", and calls for the construction of a facility in this area. Pursuing funding for bicycle and pedestrian infrastructure is list as an Action Step within the City's 2040 Comprehensive Plan (page 117).
In June, the City sent a mailer to over 300 surrounding properties inviting them to complete a project survey, call, or attend an open house about the project with the goal of defining problems, developing alternatives, and choosing solutions ("collaborate" on the engagement spectrum).

The City received resident feedback regarding trail connectivity, speeding along East River Road and turning onto Rice Creek Way, and lack of lighting. Participants included the homeowners who lived at the intersection of East River Road and Rice Creek Way who would not let their children play in the front yard due to safety concerns related to the speed which vehicles turned onto the roadway. As a result of this feedback from project stakeholders, the project team included additional speed management strategies including the radar speed sign and tightened corner radii. The project team will also coordinate with Xcel Energy to add a light to the existing post as part of the project. The residents and City also discussed the impact of snow management on transit users which will be resolved by having a plowable waiting area.

If the City is awarded funding, the City will move to its outreach policy from collaboration to involving by hosting an additional open house with residents to refine the final project plans and demonstrate how resident feedback influenced decisions. The engagement efforts will be led by grant managers Brandon Brodhag (Assistant City Engineer) and Rachel Workin (Environmental Planner). This project open house is a standard policy for the City with any construction project. The City will also review final plans with the Environmental Quality and Energy Commission, a resident advisory group that has issued a letter of support for this project. The City Council has reviewed the project and will also take action to advance the project to accept the grant and then award the project contract. There is no anticipated displacement associated with the project; all work will occur within the existing public right-of-way.

Applicants will receive a High, Medium/High, Medium, Medium/Low, or Low rating for each of the three measures. The expectations should be considered as cumulative, i.e., Medium builds on Low; High builds on Medium. Scoring via this rubric will be based exclusively on the application materials provided.

High: The project application:
- References documented organizational structures that support future engagement on the project, e.g. Policy, procedure, and/or budget to compensate engagement participants; Formal, approved engagement plan; Anti-displacement policy, strategy, or funding; Reparative project goals shaped by community; Commitment to financial opportunity for local businesses and contractors; Advisory committee charter; Dedicated project engagement staff; Other governing board or council action demonstrating a commitment to community considerations.

Medium: The project application:
- Describes how the project need was identified through planning and information-gathering work with communities
- Describes how input from engagement with "specific communities" helped identify the project need and purpose
- References Imagine 2050 Engagement Spectrum (engagement and power sharing levels) and identifies future community engagement activities
- Describes how specific communities will be included and prioritized in future engagement efforts

Low: The project application:
- Does not link past planning and information-gathering work with communities to identify project need
- References planning work that is too broad to practically influence project need
- Does not include description of input and interactions with "specific communities" that helped identify the project need
- Does not include description or commitment to future engagement efforts with communities

C. Community Benefits

Provide a description of the anticipated project benefits and how these benefits address the needs of the identified communities. Describe any past or ongoing burdens the project will mitigate and how any potential new impacts or burdens will be addressed (600 words or less).*

This project repairs past barriers to bicycling and walking along East River Road resulting from its historic car-focused design. Currently, wheelchair users would need to travel in the shoulder/right turn lane. This project will allow more people, particularly those with young children and people with disabilities a safer, more comfortable opportunity to along East River Road and reach transit, parks, and other community destinations. The project includes context-sensitive features including the addition of lighting and a speed feedback sign

which were identified by the community as project needs. The project will also positively benefit residents who live on Rice Creek Way by slowing cars entering the local neighborhood from East River Road. Residents living in this area indicated that homes close to the intersection of Rice Creek Way and East River Road do not utilize their front yards or park in front of their homes due to concerns related t turning vehicles speeds. The project also benefits students attending Stevenson Elementary School who live north of Mississippi Street by providing a direction connection to their campus. The City does not anticipate negative impacts from this project as it does not remove any access or parking.

Applicants will receive a High, Medium/High, Medium, Medium/Low, or Low rating for each of the three measures. The expectations should be considered as cumulative, i.e., Medium builds on Low; High builds on Medium. Scoring via this rubric will be based exclusively on the application materials provided.

High: The project application:
- Describes how project repairs past burdens and barriers
- Describes how project improves safe access to priority destinations
- Describes how project adds context-sensitive features beyond transportation needs (e.g. art, greenspace, other community-influenced elements).

Medium: The project application:
- Describes benefits for specific communities
- Ties benefits directly to community-identified needs
- Describe how benefits were identified through engagement
- Includes early mitigation plans for project burdens.

Low: The project application:
- Does not describe project benefits for specific communities
- Describe benefits in general terms for all users
- Does not acknowledge potential project burdens, despite high potential for them to arise.
